- 2.gajhara(<https://gajhara.com/>)

- Ready to acquire new skills in relevant technology and business areas.
- Strong problem-solving and analytical skills.
- Highly self-motivated.

COLLEGE PROJECT WORK DETAIL

Project Name:Attendance System by using Face Recognition.

Description of Project:-

This project is developed to change the traditional system of taking attendance thus making it efficient and accurate at the same time using face recognition. We used HTML, CSS, JavaScript and Python in this project. In old attendance system teachers are call the name of the students then marked attendance in attendance sheet in this process some students are give double attendance or some students are miss attendance.

Due to these Drawbacks we can design this project on attendance system by using face Recognition. It marked correct attendance in database of students. It is take less time then old system of attendance. This system should be used in institutes also in offices.
